

◇ DBMS Fundamentals (core concepts)

1. What is a DBMS and why is it used?
 2. What is the difference between DBMS and RDBMS?
 3. What are the different types of databases?
 4. What is data normalization? Explain its types.
 5. What is denormalization and when should you use it?
-

◇ SQL (Relational Databases – must be strong here)

6. What is SQL and what are its types (DDL, DML, DCL, TCL)?
 7. Difference between `WHERE` and `HAVING`?
 8. What are joins? Explain types of joins.
 9. What is a primary key vs foreign key?
 10. What is indexing and why is it used?
 11. Difference between `DELETE`, `TRUNCATE`, and `DROP`?
 12. What is a subquery?
 13. What are aggregate functions?
 14. What is ACID property in databases?
-

◇ NoSQL (modern systems – very important now)

15. What is NoSQL and why is it used?
16. Difference between SQL and NoSQL databases?
17. What are types of NoSQL databases (Document, Key-Value, etc.)?
18. What is schema-less database?
19. What is CAP theorem?
20. When should you use MongoDB instead of SQL?
